OnPoint Search

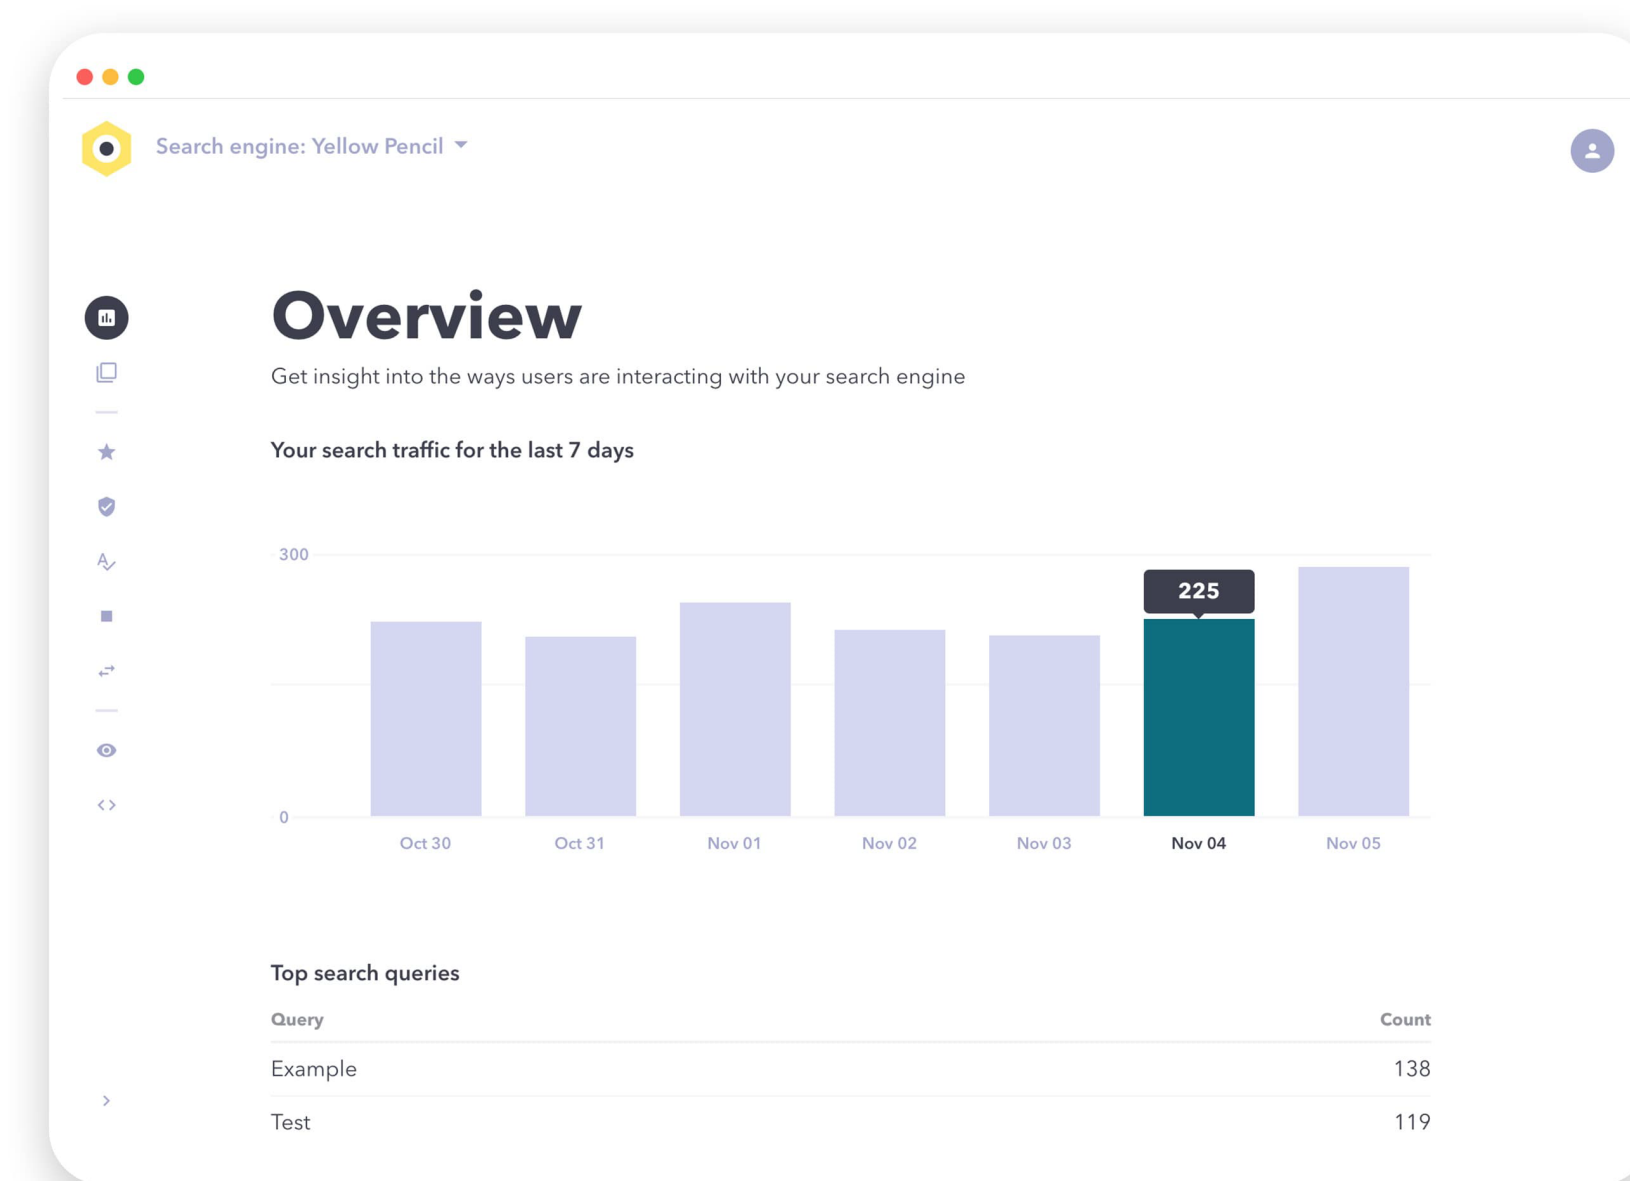

Search...

What is OnPoint Search?

OnPoint is a quick, easy, and powerful cloud-based search solution designed to integrate with any website to almost instantly improve its search functionality. The solution will find the content that your users can't, and make it discoverable via search.

How does it work?

The technology can pull information from multiple sites, intranets, and even PDFs, consolidating and centralizing your content so users can find everything they need, all in one place.

Its crawler will use your existing properties, identify their content, and integrate it into your search index. It can even pull metadata from Microsoft Word and Adobe PDF files.

Why use OnPoint Search?

Quick to install.

Point our crawler at your site and let it index your content. When complete, add a snippet to your site and your search is ready.

OnPoint operates in the cloud, so it **can be integrated with any web platform.**

Simple and powerful integration tools.

No need for complicated manuals to use OnPoint Search. The tool's straightforward interface and API let you truly unlock the power of open source.

Get powerful results.

OnPoint Search is purpose-built for enterprise sites with high volumes of traffic and is an excellent replacement for Google Search Appliance.

Start searching right away.

With no servers to set up or apps to install, most sites are crawled and indexed in under a day. After that, **installing the search function can be completed in minutes.**

Easy to use and maintain.

OnPoint's intuitive dashboard is designed to allow business users to manage website search performance without needing assistance from IT. You'll be able to control the content you share with internal and external users, and see how your search is performing with measurable results.

Make data-driven improvements.

OnPoint will allow you to continue improving the findability of your content by making easy-to-understand reports and search analytics available. Our intuitive interface lets you quickly review analytics and customize search results based on your users' needs.

Customize your search to fit your site.

Use our blacklist and whitelist features to control which parts of your site OnPoint's crawler sees. Basic access authentication lets you index password-protected content without making it public.

Is it secure?

Secure and private. We built OnPoint Search to comply with all regulatory, privacy, and security requirements based on Canadian privacy laws and regulations, which are considered some of the strongest in the world.

Compare our plans and pricing.
